

Anti Doping Requirements Following Record Breaking Performances

All athletes and event organisers should be aware of the anti-doping requirements for the ratification of World, European, and British records (including where existing records are equalled).

World and European records

Under IAAF Rule 260, World records in standard events (Senior and Junior, Indoors and Outdoors- see the tables at the end of this section for a full list of standard events for each category) can only be ratified if the performance is subject to doping control **immediately** after the conclusion of the event. Under European Athletics' regulations this requirement also applies to European records.

Where World or European records are set in running events (from 400m upwards), walking events and combined events the athlete's urine sample must also be tested for rh-EPO (IAAF regulation 3.10).

Any athlete setting a World or European record should immediately report to doping control (all members of the team for relays) and request that a sample be collected. If there is no doping control at the event the athlete should report to the event organiser for further assistance.

British athletes setting World or European records abroad, and Event Organisers of events in the UK where World or European records are set, and where there is no doping control, should contact David Herbert, UK Athletics (UKA) Anti Doping Manager, on 07803 671978 for further advice.

Any request for payment for a World or European record should be met by the event organiser or by the athlete's own National Federation.

Failure to submit to doping control immediately after a World or European record is likely to result in the record not being ratified.

*events in bold require EPO testing

Under **IPC** regulations there is no requirement for the testing of the athlete setting a Paralympic World or Area record (it being sufficient that doping control be present at the event for the record to be ratified).

Under **WMA** regulations there is no requirement for record testing in Masters' athletics.

British records

Athletes setting British records in standard events (in accordance with the UKA Competition Rules; a table of these standard events is given at the end of this section) should report to doping control at the event immediately following the conclusion of the event in which the record was set and ask for a sample to be collected. UKA will pay for the cost of tests for British records where payment is requested (please give the point of contact for payment as David Herbert, UKA- please note that UKA will only pay for **British** national records. National records set by foreign athletes need to be paid for by the athlete's home federation).

If doping control is present at an event where a British record is set, and the athlete fails to submit to testing, the athlete will be asked to explain the failure to report for testing during the ratification process and this failure to submit to testing may invalidate the record.

If there is no doping control at the event where a British record is set there is no requirement for the athlete to submit to doping control for ratification.

There is no requirement for EPO testing of British records.

There is no requirement for drug tests for British records for non-standard events.

There is no requirement for the testing of British records in disability athletics.

Commonwealth, Home Country and UK All-Comers records

There is no requirement for drug testing following a Commonwealth, Home-Country national record or an all-comers record however should the record also be a World, European or British record then reference should be made to the relevant section above.
