

Anti-Doping Requirements for Record Breaking Performances

Athletes and event organisers should be aware of the testing requirements for the ratification of World, European, and United Kingdom national records (including where existing records are equalled).

World and European records

World¹ and European² records in standard events (Senior, U23 and Junior, Indoors and Outdoors-see the tables at the end of this section for a full list of standard events for each category) can only be ratified if the performance is subject to Doping Control **immediately** after the conclusion of the event.

Any athlete setting a World or European record should immediately report to Doping Control (all members of the team for relays) and request that a sample be collected. If there is no testing at the event the athlete should report to the event organiser for further assistance.

UK athletes setting World or European records abroad, and Event Organisers of events in the UK where World or European records are set, and where there is no sample collection team present, should immediately contact David Herbert, Clean Athletics Manager, on 07803 671978 or email dherbert@cleanathletics.org.uk for further advice.

Any request for payment for a World or European record should be met by the event organiser or by the athlete's own National Federation.

Failure to provide a sample immediately after a World or European record will result in the record not being ratified.

EPO analysis: Any athlete who has broken or equalled a World or European Record in a running Event (**from 400m upwards**), a race-walking Event or a combined Event **shall** be tested for erythropoiesis-stimulating agents (ESA) and their releasing factors. In the case of a Relay World or European Record, all members of the team are to be tested.

Under **World Para Athletics** regulations⁴ there is no requirement for the testing of any athlete setting a Paralympic World or Area record (it being sufficient that random sample collection is taking place at the competition where the record is set for the record to be ratified).

Under **WMA** regulations there is no requirement for record testing in Masters' athletics.

⁴ International Paralympic Committee Rules and Regulations 2020-2021 Rule 51, Article 10

United Kingdom national records

Athletes setting UK national records in standard events (in accordance with the UKA Competition Rules⁵; a table of these standard events is given at the end of this section) should report to Doping Control at the event immediately following the conclusion of the event in which the record was set and ask for a sample to be collected. Clean Athletics will pay for the cost of tests for UK national records where payment is requested (please give the point of contact for payment as David Herbert, Clean Athletics- please note that Clean Athletics will only pay for **UK** national records. National records set by foreign athletes need to be paid for by the athlete's home federation).

If Doping Control is present at an event where a UK national record is set, and the athlete fails to provide a sample, the athlete will be asked to explain that failure during the ratification process and this failure to provide a sample may invalidate the record.

If there is no Doping Control at the event where a UK national record is set, there is no requirement for the athlete to provide a sample for ratification purposes.

Samples collected to ratify UK national records should undergo the standard analysis (no request should be made for additional analysis for EPO).

No testing should be requested for UK national records in non-standard events.

There is no requirement for the testing of UK national records in Para Athletics events.
